FIXED

Idea:

To make an animated aquarium that shows motion, loops, arrays, and interactivity. Includes fish, bubbles, and food pellets.

Features:

- Draw tank, sand, and seaweed for background
- use arrays for bubbles + food pellets
- use loops to update their motion each frame
- Add mouse click interactivity for dropping food ✓
- make fish swim in math ($\sin()$ wave motion)

Code Plan:

1. Background - rectangles, colours
2. Bubbles move + reset - arrays + for loop
3. Fish swim side to side - function + math ✓
4. Click to add food - input detection
5. Food falls down - gravity logic + condition

main ISSUES!

- Streaking bubbles + food
- Fish disappeared
- Fish were not connected (body + tail)

- MAKE fish swim ✓
- Bubbles (no streaks) ✓
- Fix food fall ✓
- Testing L mouse click ✓
